Subject: My Cabinet?

Posted by dbeardsl on Fri, 15 Mar 2002 14:37:20 GMT

cool, I'll mess with the scale. Though I'm not sure how you got your graph to show only negative values, is there some way to graph equations? like (V[6] - V[5])?I suppose I could use the real spice...   I tried once and couldn't get the graph anywhere close to yours. Though I use it to lay out the circuits, then just grab the netlist which is the spice model.But How did a cabinet factor in here? I copied this straight out of the crossover doc. There isn't anything there to simulate a box...How would you simulate a box anyway?
