hi Sam!no no, i meant the D405Ti driver...  
([selenium.com.br/site2000/linha\\_profissional/titania/pdfs/d405ti.pdf](http://selenium.com.br/site2000/linha_profissional/titania/pdfs/d405ti.pdf))it's a 2" throat driver... it is rated for 125W RMS with xover above 1200Hz... it's pretty big...and no... my intention is not to buy the xovers built, but building them myself, down to the coil... how do you think a single layer air core coil would perform? because that is what i will build... or what i want to build...well, thank you very much for your feedback!! i'll post pics when the speakers are completed...thank you very much!Matias
