Well, I'm contemplating taking the "pi plunge". I've been thinking about the 3pi Theater. I thought I'd read some posts that said the builder could alter the cabinet shape without a negative impact on the sound, so long as the same volume was kept. With that in mind, and the fact that the 3pi is (as I recall) 30" tall, I could make it 36" or 38" and just change the other dimensions, right? That would make the speaker a bit less bulky looking (short and squat) and bring it to the height that's being discussed here without a riser. What do you all think? Steve
