If i would buy a nice plywood sheet with fineer, i would have another problem. If you would make a joint connection, the only way to let the fineer reach eachother in the edges is to make a cold diagonal joint. Otherwise, the fineer would stop a few millimeters for the edge, depending on the type of joint you choose. So, whats best, first make a enclosure and fineer it later, or buy a already finered sheet? Greetingzzz, Eirikr.
