You're not missing anything and it's not a dumb question. The cutout isn't shown because placement is a relatively trivial matter. There are so many suitable connection panels that I didn't feel it wise to include fixed cutout dimensions in the plans. But the hole that should be cut for the connector I include in the kits is 2.875" wide x 2.125" tall. The cabinets that are built here all have standard locations for this panel - like centered in the back and 2" up from the bottom for the two
