Subject: What are the effects of cabinet volume on sensitivity?? Posted by Robert Hamel on Thu, 16 May 2002 13:54:01 GMT View Forum Message <> Reply to Message

I have been measuring the sensitivity of my home builts and they are lower than I expected them to be. I am using a 10" in a small volume sub enclosure. Can the loading of the subenclosure raise the sensitivity of the midrange driver and can the box size effect the woofer???
