Hey guys, I'm working on finishing up a pair of 2-way bass reflex cabinets using my spare Eminence Kappa 15's and PSD2002 compression drivers. These units are probably extremely similar to Wayne's Theatre 4 pi's, but with more mechanical and electrical power handling. Here are the specs on them (per single cabinet) -RMS Power: 450 wattsPeak Power: 900 wattsFrequency Response: 37-18,000 Hz Sensitivity: 95db/1w/1mxover frequency: 1,500 Hz @ 12,18 db/octaveThe woofers are in 5 cubic foot ported MDF cabinets which are painted glossy black. I haven't finished the units yet, and I planned on putting it on the backburner. However, if anyone has serious interest in these, I was gonna get it done now instead of later and then you can decide if you still want them. If I can't find a buyer for them soon, there's no sense in me spending the extra money to get them finished up right away. I'm selling the pair of them for $600 dollars plus shipping from London Ontario, you can pick them up as well if you want.I'm not trying to spam Wayne's board, but these are nearly identical to a lot of Wayne's designs, so I thought he would be okay if I posted it. If not Wayne, just delete this message.Thanks!siradam48@hotmail.comAdam
