Two questions: 1) I noted from the pictures of completed speakers that most pi spkrs are placed close to the back wall. Is that how they sound best? Do you get better soundstage by moving them out from the walls? 2)I like the sound of the Cornwalls (especially the old Cornwalls) and was wondering if the Theater 3 or 4 is faily close in sound and maybe a short description. Also, would it be possible to get the cabinet plans for the 3 and 4?Thank you
