Wayne:I have some friends opening a coffee shop, Starbucks like, The new style donut shop!He has a Sony Reciever that has all that home theater stuff on it (I haven't looked at it yet). I assume outs for 5 sats and a sub-woofer. I was thinking 5 Studio1s and a Pi4/15" and no tweeter for the sub. Does this sound like a reasonable system? The Pi1s would be up at ceiling height. Also I would wire them with a double run of cat5 plenum grade. 1000 sq ft space, L shape.Thanks, Ron
