After deciding that the Theater 4Pi or the Thermionic 3Pi are both too big for my room, I figured I could build them with altered dimentions. Would I be able to build a Thermionic 3Pi into a 42"x15"x17" box (this would maintain the same volume)? Or would I need to do more than just maintain the internal volume of the box? Height isnt really an issue in my room, only width (depth too, but width is more important). [My System and DIY Projects page](#)
