Thanks for the advice - I think I might just go with this configuration (except make the 17" side be the front baffle...would probably allow the woofer to fit better)So to get even closer I am planning on making the boxes 42"x17"x15.25" which works out to a box volume of 10888.5 cu in, the original 33x22x15 box has a volume of 10890 cu in. I am assuming a difference of 1.5 cu in wont make a different (0.01%).My System and DIY Projects page
