Subject: Info on buying and using a woodworking router?

---

I have a very limited workshop when it comes to woodworking tools. This weekend I made a sample 1 Pi box sans the driver cutouts to see how a box might turn out before I try it with good wood. I tried making a box using 45 deg. cuts on all of the boards so the edges of the boards didn't show. All I had to use was a power hand saw. It came out a little rough. I'll need to scrap that idea until I get some better tools. I really would like to buy a router for my next power tool purchase. Does anyone know where I can find out more about them so I buy the right one? I guess if anyone knows a website with a router primer or FAQ that would be what I'm looking for. I basically would like to use it to cut the holes for drivers in a cabinet and also to round off the corners on a cabinet. Any Ideas? Eat Mo' Hot Sauce, crazychile
