Well, not being one to leave well enough alone, I've been wondering about a HF motor upgrade to my Thermionic 3pi's. Actually a friend came over yesterday to have a listen to the new speakers and got me thinking about it -- thanks a lot Harry. So I'm wondering if I can swap out my Eminence PSD2002 motors for JBL 2426H motors. It looks like I can still keep the crossover at 1600hz. Has anyone tried this? If so, what would I need to do to get the thing in balance, and can the 2426 just be bolted on to the horn? Any thoughts would be appreciated. Thanks, Steve
