Dear Till E., I have a few questions about the 'tried and true original wood finish'. 1. Should it be used on non treated wood like maple muliplex2. If you use the varnish, are you able to make the multiplex absolutely smooth (no feeling of wood any more)3. Can you use additional lacquer it after this treatment4. Does it really get dark after a few treatments, i.e maple becomes medium oak, or does it only makes the tan of the original wood deeper.5. how large an area can be done with one can of wood finish. I hope you respond. Thanks. Walter
