I Love my Cal Audio Icon MKII as well. It can do things my TT never thought about. I am considering checking out the cheapy Sony sacd as well (as per Till's impressions). Maybe waiting for more titles. On another note, is anyone out there fond of Plaid or Boards of Canada? (I don't think they are from Canada) If so, what else do you like on your Pi's? Boards of Canada "Geogaddi" has such an intense palate of texture. This is one disk that makes me scratch my head when people say electronica isn't music. I didn't know compression drivers could do that, was my first thought when I put this disk through the new Pi's. I can't believe how obviously compressed electrostats sound on good electronic material. Thomas
