Hope you can make it. For this meetng I plan to bring my latest version of the Studio One Pi tower, which includes the kits I bought from you in a 38", two cu ft tower enclosure, with upgraded crossover parts (Mills resistor, Erse 14 ga perfect lay inductor, Clarity SA cap), and bi wire speaker terminals. I also plan to bring a pair of speaker cables I recently bought from a new seller. Compared to the Royal brand OFC cable I was using, these lift at least two or three of the proverbial veils from the treble. I was a confirmed cable agnostic until I heard these, and I never realized how good that Vifa tweeter really is until I heard it with the Clarity cap, silver plated teflon insulated copper internal wire, and the new speaker cables. Everybody else is invited too!
