Using your numbers,  $F_{ts}=26.6$ ,  $V_{as}=15.0$  and  $Q_{ts}=0.40$ , PiAlign values are  $F_{rd}=26.6$ ,  $V_{ad}=15.0$  and  $Q_d=2.5$ . PiAlign suggests making a 6 cubic foot box tuned to 25Hz. For a bass-reflex cabinet, actual dimensions are 34" x 22" x 15" and with a rectangular port having inside dimensions of  $3 \frac{15}{16}$ " x  $6 \frac{15}{16}$ " x 14" long. The resulting system has a lower -3dB point of 40Hz and response down to this frequency is nice and smooth.
