Thanks for the input Wayne...You emailed the plans for the theater 4 Pi's to me awhile ago. The dimensions were 2'x 3'x 18". I made them 2' x 3' x 19". This makes them about a .5 cu ft more than specs. Will this hurt ?I used PartsExpress pxb2-1k6 part#290-634 cross overs with added elements R1 = 12 ohm, R2 = 30 ohm and C1 = .47uf for the tweeter. And C5 = 20 uf and R3 = 8 ohms for the woofer.Did I go wrong somewhere ?Are you still making crossovers for Pi 4's. Maybe it would be easier for me to just buy yours. I love the Pi's but I miss the mid-range...Thanks again for your help.TomP.S. My old moniker was tottman2. It is the email name my company invented based on my first and last name. Not very interesting. I love the movie Matrix, so I thought I'd borrow the stars name.
