hi gang, still toying with a woofer to use with my jbl 4655's. i spoke to the cdn eminence distributor today and they recommended a kilomax 18 in a 4.7 cf sealed box. response is 3db down at 47hz. is this low enough? will this provide gut wrenching bass in a 25x10 room. i'd use a pair with the jbl's stacked on top. thanking you in advance for your input.cheers,george
