Just got the MDF for my One Pi speakers! I was going to build the Two Pi but could not get the Alpha 10 drivers locally, so I decided to go with the smaller ones. About the bass ports. I know we've asked you before Wayne and I, just like Mattias, can only find 65mm ID tubes. Well actually I CAN get 59.2mm ID PVC tubes but without the flange that's on "real" bass ports which would make it hard to mount them in a nice looking way. How are the factory made One Pi speakers made? Are the ports mounted before veneering the speakers so that the veneer covers the ugly edge of the tube?/Erik
