I'm pretty sure it was drawn by Stan Mott and maybe Henry Manney III wrote the stories? Anyway, I was reminded because I'm doodling with various 2Pi shapes, one of which has a spheroid cabinet with the Piezo peeking over the top and the woof smack in the middle. Like the "Cyclops" All I have to do is cut 38 - 3/4" ellipses to laminate the 14 1/2" deep base! Alternatively, 19 - pies to make the Pi. And then mount the tweeter on a stalk. Put the piezo in an wooden egg cup. Wouldn't need stands. Anyone have opinions pro or con? Especially on raising the tweet on a stalk of some sort?
