Some new Lf cabinets Ive been fooling with and have made it inside finally. This is a JBL2245 with box tuning help from Wayne and his Pi alignment. Sitting on top is 4pi pro with 2226 and on top of that is a wood horn with a 2426, soon to be replaced with another horn in matching wood to the cabinet moldings. So far the sound is well..... I have no need for a sub any more!WooHoo! Or anything else in the lower octave.Still messing around with amps, crossover and Ultracurv. Sounds nice, very nice.Bill
