I've been playing with boxplot and can't seem to make it do what I want. I've decided to build the 2's with a rectangular, acoustically inert base 10" tall and put a polygon on top with all sides parallel but the front baffle which would slope toward the top 11 1/4 degrees. That would put the tweeter at about 30" above ground and firing up. I think the box should be 15wX22hX12.5d. Could you check my figures, please?
