The KSN 1038, 1041 and 1056 are basically the same tweeter, different only in cosmetics. One has a chrome trim, one has a chrome trim and chrome phase plug and the other is all black. I forget which is which, and I've always tended to order the 1038's.About the coils, don't fret a 2% variance. The crossover filters don't need any more precision than that, and in fact, 5% and even 10% is fine in some cases.
