Hi, Still enjoying the Studio 2Pi in my living room. I am in the process of building a small, permanent, listening room which is 12 ft. X 15 ft with a 10 ft dome ceiling with no windows (that's the biggest space I can haggle with my wife). I have just ordered the Paramours to go with the Foreplay in this room. Which Pi speakers would you suggest? I am leaning towards the Thermionic 3Pi or the Theater 4 or would you suggest the 2Pi and just add a subwoofer? Your input will be highly appreciated. Best Regards, Edwin
