that, they tend to have rising response into the midrange. The bass is clean and full, but many people still like to augment them with a sub.I think George built his exactly as the plans indicate,

4" diameter port that's 3.5" long. The intended port material has 0.080" wall thickness, and that's what is included with the kits. This makes the actual port diameter be 3.84", and system tuning is

Stage and Premium Stage Series speakers share the same cabinets with their Professonal Series counterparts. Here are the response curves for the Stage and Premium Stage

Series use Omega's and Premium Stage Series use Kilomax components.
