hi till, the brits make good stuff. i'm using an inexpensive rane x-over with a 4th order network (24db per octave slope) and i like the sound. by the way, the compression reference is about the typical hi-end low efficiency loudspeaker which compresses the dynamics. cheers, georgeps. is it true the cleveland indians are changing their name to the cleveland brits? something to do with never being able to beat the yankees.
