I've tried many different piezo tweeters, and to tell the truth, there are several I don't like, such as the KSN 1005. On casual inspection, you might expect it to sound the same. But it is harsh and doesn't sound good to me. On the other hand, the KSN 1038/1041/1056 are all the same, except for cosmetic differences. They sound very good to me, and I'd recommend that you stick with them.
