I can get the parts here, it's just that ALL european stores I've seen have different power ratings on the drivers than the Eminence ratings. For example the Delta 15 is rated at 400W RMS, the Delta 15LF at 500W RMS, the Delta 10 at 350W RMS and so on...I'm 99.99% sure they are the same units, I'd just like to know why the ratings differ./Erik
