Subject: Re: Differences between 2241 and 2245? Posted by Anonymous on Tue, 03 Sep 2002 22:46:00 GMT View Forum Message <> Reply to Message

three things on my mind - lol#1 Is there a correlation between a woofers x-max rating and"tight bass" ? if you know what I mean (loose suspension and tightsuspension). Do "tight coned" woofers sound better than "subwoofers",or is this just a myth?#2 Is there a correlation between a woofers voice coil diameter and"tight bass" and/or sound quality assuming similar woofers? or is the voice coil just a function of power handling,not sound quality ? ie, if JBL made a woofer with a 2" voicecoil would it sound as good/bad as the same one using a a 4" dia voice coil ?#3 What factors do you look at when trying to find a wooferwith a strong motor ?
