Hi All: I am exciting about getting Wayne's help optimizing the tube crossover I am building for two way horns. my speakers are going to be altec 416 8-a woofers in a ported box with altec 802-8d drivers on 511b horns sitting on top. You can buy the circuit boards to build the crossover from Gary Kaufman (a real nice guy).I am now getting ready to order the parts for the crossovers and the power supply, just trying to decide what type of resistors (metal film, carbon film, carbon composition, wirewound) and caps to use in the design. any suggestions gratefully accepted.best, Kevin
