I built a Pi speaker system for my brothers new home theater. Five 1 Pi speaker systems for front l-r, rear surround l-r and rear center. A double 1 Pi for the center (2 alpha 8s and 1 peizo high frequency driver. All powered by 100 watts from an Onkyo receiver driving full range. Sub frequencies are cover by a single 12cu.ft. ported enclosure with 2 EV 15Bs powered by 400 watts crossed over at 40 hz with a 12db slope. Everyone that hears this system is astounded by it's clarity and impact.I recommend Pi's for home theater. Go for it!!!
