After many side projects with classic electrovoice and coral stuff I finally got back to serious listening on the pseudo 4 pi pro which is a JBL 4648A with 2426H on a 2345 horn all linked by Wayne's neat 4 pi pro crossover. The speaker stands are Home depot 18" by 29" furniture dollys which came with color matched carpet. The sound is wonderful and is free of distortion at all reasonable listening levels. I tried a super tweeter and you just don't need it, at least for old guys like me. My dogs ears lifted so he was hearing something from the super but I wasn't and will stick with the two way set up. This has been a learning experience and fun to put together. Many thanks to Wayne and all the others here who helped me along the way. TDC
