Subject: Horns Length, Frequency Wave Lengths, And, All That Good Stuff Posted by Elliot Thompson on Fri, 18 Oct 2002 13:04:01 GMT View Forum Message <> Reply to Message

Greetings! I was wondering in reference to folded horns that are 4 feet.Would length of the horn (4 foot) produce the wavelength somewhere around 200Hz? If not, how can you measure the horns length to determine the frequency? Also, if this box was a 4 cubic foot enclosure, what would that be inhorns length? (feet)Thank you,Elliot
