As you can see just below, I'm now entertaining the thought of going to a 3-way, which would put the TAD 1602 and JBL 2123 in the same box, with the Martinelli horn sitting on top. Does this mean my 5 cubic ft (external) box should now be 8 cubic feet? Would this allow me to tune the 1602 lower than the 37hz recommended for it in the 5 footer?I'm getting in soooo much deeper than I had planned . . . ;-) Keep your ears and your mind open.
