Eminence has retained the existing Delta and Delta Pro series, but has added a new line that uses neodymium magnets. This was done as a weight saving measure, as the same strength motor can be made with a small magnet made of neodymium alloy. I haven't looked at these new "Dentalite" devices more than a passing glance, but I strongly suspect Eminence has designed the speakers to retrofit existing cabinet designs. In other words, it's probably a direct replacement, just lighter.
