Sorry I have not kept up with you (we have crossed paths in a most positive way) or the bottleheads for a long while (a shame on my part) but you are doing what needs to be done. Subjective listening at what sounds proper based on how the music should sound. Perhaps a sliding tap on the transformers are of order where you can dial in the exact value that covers the most compromises? If it were available. In Mastering engineering, we do increments and backchecks in the hundreds of a db order at certain frequencies until it fits the gamut that translates. My hat is off to you for taking the bold approach...after all there are no absolutes, it all is only relative. Wayne damnit... I did not get to hang with you in the Cutlass. I left NW AR over a year ago..do get up with me dude..we have some conversation to discuss...Bill
