Wayne, Many thanks for the plans. i have located a pair of Alpha 10 drivers, and following Vladimir's advice I hope to find the KSN 1036 at a Monacor dealers, they do not have them in stock but will order them for me. Now a couple of questions, What are the advantages and disadvantages from having a front facing port and a rear facing one? Are there alternatives to the glassfiber insulation? I have lined the loft space of my house with this type of material, not a nice experience, and the idea of all those fine particals being pushed out into the room through the port is not one I like. Is the only reason that you use such thin board to make use of the sheving material? Would thicker be better? Please don't take offence at my question's but I am a newbie at speaker buiding. Colin
