Subject: Re: Impedance of Pi speakers using 1.6khz crossover Posted by Wayne Parham on Sat, 30 Nov 2002 05:00:59 GMT View Forum Message <> Reply to Message

You could certainly try different taps, because the system does exhibit increased impedance from 1.6kHz up.But then again, it is 8-10 ohms through the entire midrange region and only rises as frequencies enter the overtone region, with two small bass resonance peaks below 100Hz.
