I'm thinking over a sat\sub system for HT mains and surround and the 1 PIs in 9ltr closed boxes look good for a Q of +-1 115hz F3. Has anyone built anything close? How are the mid\highs on the Alpha 8s? New data sheets show a rise before rolloff. Is there a crossover on the 1s to smooth this?this might make for a nice punchy little box.Thanks, Scott
