Hey Wayne I have a pair of Beyma 12cx. Do you know if they would work well in 6 Pi's I'm itching to try horns? they were in an Afterburner type cabinet but had to move them across the country. The only part I think may not work about the 6 Pi's is the tweeters already in the middle of the driver. If your willing to email me plans I would appreciate it (Metalsman75@telusmail.net) If they are not suitable for the 6 Pi or 3 Pi I guess I will build Afterburners. I know I can build a great box but I dont understand the speaker response kinda stuff to well. Thanks for any advice and merry xmas to all.
