I have the parts purchased for a 650 hz x-over (for my altec 416 pi's) and a chassis laser cut and powder coated that I will pick up this weekend. I also have a pair of gary kaufman's boards for steve bench's circuit w/o any compensation. when I told wayne what I was up to, he got interested in refining the circuit which he is now doing. I am going to try mine with and without compensation i think. I'd hope to have it built by the new year, but then I'd have to build the speakers too cause all my other speaks are FR single drivers.Kevin
