G, I would like to passively crossover between the preamp and amps like you have described. If you can send me the schematic with the crossover points (I am guessing 1.6kHz) I would appreciate. I think if you could post the schematic to the Pi forum, there are many others who would do the same. I would be using Dynaco SCA-35 and ST-70 for mine, but crossover at 800Hz using Altec horns and drivers. I will take the signal from the volume control in the SCA-35 (it is integrated amp) and custom rewire for preamp out and power amp inputs. Thanks for posting this, I have been waiting for a post like this one. Regards, Ron
