Sam, R2 is 14 ohm and R1 is 30 ohm, with tube amp running, is fine, with solid state, I put a 30 ohm resistor across the horn driver. My preference is for hotter sounding horns with the tube amps gives me a sweet soundstage. I can't wait to finish breaking in these 2-pi's so I can put together a 4 pi with JBL 2226J and Altec 288/311-60 and play with that crossover, I like to breadboard my crossovers(on top of speakers) so I play and see the results. Regards, Ron
