---

Hi Folks, My wife liked the 2 Pi's I built, and now I'm considering building another set (plus a center channel something or other) to make up a home theater set for the bedroom. The place for the TV is a 6 foot wide shelf that divides two rooms. My question is how far from the TV do 2 Pi's need to be to not whack it? I'd hate to wreck a perfectly good TV with nice speakers. Thx, Chris
