>> I purchased a pair of mint used vintage Electro Voice LS12A 12" >> 8 ohm full range drivers from ebay. I would like to incorporate >> these drivers in a pseudo Pi alignment. Unfortunately, >> I have no specs on these drivers. Search the archives for "Woofer Tester". You'll find ways to measure the speakers with a signal generator and meter or scope, a dedicated woofer tester or a PC program like Speaker Workshop. >> 1) Any ideas what type/size enclosure size will work

favorite and it gets my vote. Then again, since it looks like you are going to use the EV's full range - well up through the vocal overtone region - You might prefer to make a standard

other)? Can't say without seeing the response chart. If response is good to 3500Hz, then the KSN1038 might work for you. >> 3) Does anyone have the TS parameters for these drivers? Someone else here might but I don't, sorry.
