Hi Bill, Thanks for your report! I must admit that your wood horns look truly great! I would really like to hear a bit more about your impression of the differences between using a cone driver and a 2" compression driver (and horn) in the range between, say 500Hz and 1.6kHz. What are the pros and cons of either solution? Could you please elaborate on this? I thank you a lot in anticipation! Regards Peter K.
