Hey everyone, I'm STILL deciding which pi to build, heh. Thing is, I listen to alot of bass heavy music, and these speakers will be for my "non pain in the ass" apartment system, which I'm looking to avoid alot of wires, outlets and a subwoofer. Wayne or anyone else, which pi do you believe to have the "most" or most prominent bass? I'm thinkin I'm gonna go with the theater 3 pis, since the low frequency driver is theoretically a sub woofer, and I'll use a SS amp. What do you guys think?
