Hey everyone, what do you think of the Celestion studio series CX 1512 drivers? They are for sale here <http://cgi.ebay.com.au/ws/eBayISAPI.dll?ViewItem&item=3011620558> What application are they best suited to? Would they be good for midbass/midrange use? Are they quality drivers? Efficient? If anyone has used them before I would like to hear from you! Thanks! Adrian
