Hello, I am in the process of building a loudspeaker enclosure that will be compact and is capable of high output with clear sound for live sound. I know that nothing is better than a three way cabinet with a subwoofer. Now, the dilemma comes in because I would like the enclosure to be long throw and I don't know whether to use a cone midrange or a compression driver/horn assembly. Here is a couple of links to show you the cone mid range cone and horn assembly I'm having a hard time deciding. The cone midrange I am considering is the Eminence Alpha 8 MR I was unable to post the info on it - Thanx in advance - Don
